Poll and Graph

Learn to gather, record,
compare, and analyze data

Knitting Colors Poll and Graph

Instructions

Print one tally page and one graph page for each student.

Have student poll family, friends, or classmates (no more than 10 people). Demonstrate how to survey by asking the student which color sweater he wants knitted for him. Put a tally mark in the box of the color the student chooses. You may also want to demonstrate how to make a bundle of tally marks.

After the student has gathered and recorded enough information, show her how to use the information to graph the first color. Encourage student to continue with the other five.

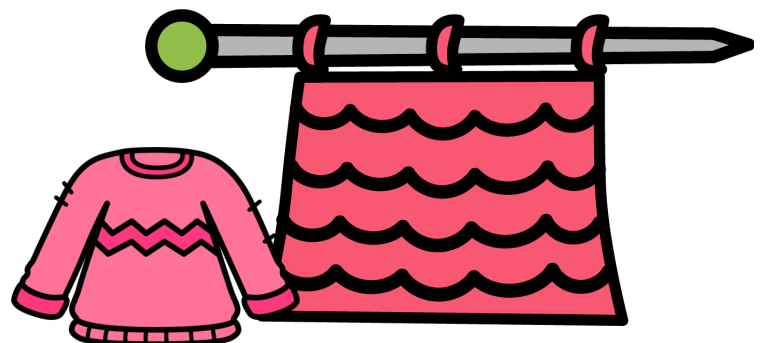

Use discussion questions to help your student compare and analyze the data on the graph. "How many more people want red sweaters than want green sweaters?" "How many people total want green, pink, and yellow sweaters?"
